## Customer Reviews

This is not your typical history of organic evolution. Eiseley ruminates on the philosophical character and consequences of the various theories that lead to and culminated in evolution. Moreover he does not take an academic, historical approach; rather he uses a poetic one: he employs metaphors, imagery, allusions, and other tools more typical of a poem. The first four chapters detail how each of the world, death, life, and man became natural. In other words, how each became governed according to universal laws, gleaned by reason, without the intervention of a Divine Maker in earthly matters. "God, who had set the clocks ticking, was now an anomaly in his own universe." (p. 15). James Hutton's historical geology, Charles Lyell's mass historical extinctions, Darwin's evolutionism as applied to non-human species, and finally evolution as applied to humans - each find their poetic explication in these first four chapters. In Chapter Five, he discusses the consequences of making man natural on his psyche: "How Human is Man". "Man did something which at the same time revealed his continued need of the stability which had preserved his ancestors. Scarcely had he stepped across the border of the old instinctive world when he began to create the world of custom" (p. 124). Man, by using his newfound capacity of reason, created a new unnatural world, one outside his old instinctive nature. But reason created a short-lived security as it developed and is always developing new tools, for either beneficence or destruction, which threaten man's future. These tools do not have an end; they are means which presume a worthwhile purpose will be found.
